**EDU0104 — Functional Online Module Specifications**

Recommended minimum design requirements for SA1

- One complete online learning module, not an entire course
- Three coherent lessons, organized around a single module topic
- Three to four measurable module learning outcomes
- An orientation, clear navigation, and accessible learning resources
- Student-centered learning activities and purposeful interaction
- At least one formative assessment in each lesson
- One authentic summative assessment with a rubric
- A meaningful feedback-and-revision opportunity
- A small-scale pilot implementation with appropriate evidence

**Module Structure:**

<table>
<tr><td colspan="3">ONLINE LEARNING MODULE<br>e.g., Evaluating Digital Learning Resources<br>3-4 module learning outcomes</td></tr>
<tr><td>LESSON 1<br>Foundations</td><td>LESSON 2<br>Application</td><td>LESSON 3<br>Evaluation</td></tr>
<tr><td colspan="3">Each lesson includes content, learner activity, and evidence of learning.</td></tr>
</table>

Note: A **course** contains several modules or units. A **module** is a coherent instructional unit organized around a substantial topic or competence. A **lesson** is a smaller learning sequence within that module.

**SA1 Module Scope**

| Component | Recommendation |
|---|---|
| Online modules to develop | 1 complete module |
| Module learning outcomes | 3-4 measurable outcomes |
| Lessons within the module | 3 lessons |
| Lesson-level objectives | 1-2 per lesson, where useful |
| Formative assessments | At least 1 per lesson |
| Authentic summative assessment | 1 culminating performance task |
| Feedback opportunities | At least 1 meaningful feedback-and-improvement cycle |
| Estimated learner workload | Approximately 3-6 hours total, adjusted to the target learners |
| Pilot participants | Approximately 5-10 learners, when feasible |

**Example Module**

**Evaluating Digital Learning Resources**
Target learners: Pre-service teachers
Estimated duration: 1 week, approximately 4-5 hours of learner work
Module learning outcomes
By the end of the module, learners should be able to:

1. Explain key criteria for evaluating digital learning resources
2. Analyze digital learning resources using pedagogical and accessibility criteria
3. Evaluate an actual digital learning resource using a structured rubric
4. Propose evidence-based improvements to the evaluated resource

**Lesson 1 - Understanding Quality in Digital Learning Resources**
Approximately 60-75 minutes; Supports Outcome 1
Learners explore pedagogical alignment, usability, accessibility, and resource quality
Learning activities: Short video, reading, guided resource comparison
Formative assessment: Short quiz with explanatory feedback

**Lesson 2 - Applying Evaluation Criteria**
Approximately 75-90 minutes; Supports Outcome 2
Learners apply evaluation criteria to sample digital resources
Learning activities: Guided analysis, collaborative discussion, checklist exercise
Formative assessment: Draft resource audit with peer or teacher feedback

**Lesson 3 - Evaluating and Improving a Resource**
Approximately 90-120 minutes; Supports Outcomes 3-4
Learners evaluate an actual digital learning resource and develop an improvement proposal
Learning activities: Independent resource audit, recommendations, reflection
Summative assessment: Resource Evaluation and Redesign Report, evaluated using an analytic rubric

**Notice the progression:**
***Lesson 1: Understand => Lesson 2: Apply => Lesson 3: Evaluate and Improve***
The lessons are not three unrelated topics. They progressively prepare learners to demonstrate the module learning outcomes.

## What You Should Actually Build in the LMS

**Module: Evaluating Digital Learning Resources**

**00 - Start Here**
- Welcome, module overview, and About the Author (photo and bio-note)
- Learning outcomes and navigation
- Pre-assessment / prior-knowledge activity

**01 - Lesson 1: Foundations**
- Learning materials
- Learning activity
- Formative quiz and feedback

**02 - Lesson 2: Application**
- Worked example and resources
- Resource analysis activity
- Peer feedback / discussion

**03 - Lesson 3: Evaluation**
- Authentic assessment instructions
- Evaluation rubric
- Submission and reflection

**04 - Wrap-Up**
- Key takeaways
- Self-assessment
- Module feedback survey

## Assessments

| Lesson | Formative assessment | Summative assessment |
|---|---|---|
| Lesson 1 | Quiz with explanatory feedback | — |
| Lesson 2 | Guided analysis with peer feedback | — |
| Lesson 3 | Self-assessment against rubric | Final authentic performance task |

This gives students **three formative checkpoints** and **one culminating summative assessment**, without overwhelming learners with unnecessary graded tasks.

The authentic assessment should provide evidence of the most important module learning outcomes. It does not have to assess every outcome in isolation if the final performance integrates several outcomes.
